

IT Modernization and Cloud Services

All Native Group

- SBA Certified 8(a)
- Top Secret Facility Clearance
- ISO 9001:2015 Certified
- CMMI Level 3 Appraised
- GSA Stars III
- Navy SeaPort-NxG
- GSA MAS Schedule

Thunder Ridge Solutions Company

- Tribally Owned
- UEI: JSCHHWMLJHA5
- CAGE CODE: 78WS1

About Us

All Native Group (ANG) is owned by Ho-Chunk, Inc. (HCI), the award-winning economic development corporation of the Winnebago Tribe of Nebraska. ANG is comprised of Small Business Administration (SBA)-certified, 8(a), and HUBZone companies. In 1994, tribal leaders founded the company to promote job creation and reduce poverty among tribal members.

All Native provides comprehensive support to customer IT modernization efforts, offers cloud migration solutions, delivers enterprise asset management and enhances the cybersecurity posture of Government agencies. We deploy experts and specialized professionals adept at executing industry-recognized IT solutions in support of Federal Government initiatives. All Native provides IT service management, application development, modernization, governance, and cloud solutions. In addition, we operate network enterprise centers, manage networks and systems, as well as support desktop operations, and cybersecurity needs. With a history of successful collaborative work with our Federal partners, ANG looks to find the appropriate solutions for each customer. We look forward to sharing our expertise with your team.

Services

IT Services

- Enterprise Modernization
- Cloud Migration
- Asset Management
- IT Security Lifecycle Management
- Strategy and Governance
- Network Administration
- Application Development
- Information Assurance
- Enterprise Architecture
- LAN/WAN Services
- Database Design
- Database Administration
- System Administration
- Help Desk
- Software Development
- NOC Support
- System Engineering
- Documentation and Testing
- Data Transmission Support

- Secure Wi-fi Implementation
- Software Implementation

Technology

- Network Administration
- IT Infrastructure Hardware Installation
- AV/VTC Services
- Virtual Environment
- Mobile Computing
- Hardware Evaluation
- Learning Management Systems
- Licensing
- Subscriptions
- As A Service Deployment (SaaS, PaaS, IaaS)
- Technology Roadmaps
- IT Strategy
- IT Governance and Policy
- Artificial Intelligence

- Machine Learning
- Computer Vision

Cybersecurity

- NIST RMF Framework Implementation
- Security Artifact Development
- System Security Lifecycle
- Privacy Impact Assessment
- Security Control Selection
- Vulnerability Scanning
- Security Policy Development
- ATO Process Execution
- Network/System Application Security
- Incident Response
- Incident Investigation
- Configuration Management

U.S. Citizenship & Immigration Services (USCIS) Office of Information Technology (OIT) Azure and Microsoft 365 Deployment Cloud Services. (\$24M) . We support operating, optimizing and maintaining existing and new Microsoft 365 services into an Operations and Maintenance (O&M) state and planning future service sustainment strategies and activities for Microsoft M365 applications including Bookings, Delve, Exchange Online, Forms, OneDrive, Office Web Apps, Planner, PowerApps, Power BI, SharePoint Online, Shifts, Streams, Teams, Viva Insights, and USCIS OIT 2 Whiteboard, Azure Active Directory Premium 2, Azure Information Protection Premium 2, Azure Rights Management, Defender for Office 365, Defender for Cloud

Defender for Identity and In Tune, as well as additional Microsoft 365 Services. This includes support for M365 service integrations with both Microsoft and other Technologies, e.g., AirWatch, ServiceNow, Archive360, JAMF, and AgilQuest. Tasks include:

- Operations and Maintenance Support for currently enabled Microsoft 365 Services
- Support for new Microsoft 365 Service Adoption, Governance and Preparation for Operations and Maintenance
- Support for M365 Service Integration with Azure and Microsoft and Other Technologies

Customs and Border Patrol (CBP) Information Security System Officer (ISSO) and Web Collaboration Support- \$22M. We provide comprehensive full-time, on-site ISSO support for Federal Information Technology (IT) major application and integrate security design principles across disciplines and SELC/DHS NIST RMF process. This is intended to help manage risk and to satisfy the security and privacy requirements in FISMA, the Privacy Act of 1974, OMB DHS CBP policies, NIST, and Federal Information Processing Standards. ISSOs are responsible for conducting structured security assessment and authorization (A&A), monitoring, certification and accreditation (C&A), activities utilizing the Risk Management Framework (RMF), Cybersecurity Framework (CSF), and DHS Security Authorization/Ongoing Authorization guides in accordance with the provisions of the Federal Information Security Modernization Act (FISMA).

Department of State (DoS) Overseas Building Operations (OBO) - \$250M. All Native provides program management support to worldwide projects on a wide range of on-site program management for IT support services, administrative, architectural/engineering, communications, and facilities/logistics, and tasks. Under the IDIQ, we support the \$45M Application Development Support Services (ADSS) task order, which includes BI - data warehousing, development of web services for data integration, user support, application development/enhancements of custom systems and COTs products and database operational and management support. This support includes the software development lifecycle to ensure implementation of Cloud solutions. We spearheaded the transitioning of all Web Development Team's approximately 10 .NET applications including SHEM and Non-SHEM application code base to Microsoft DevOps and was first to transition to full cloud-based development. We work closely with architects and engineers to recommend and design database or data storage solutions that effectively reflect our clients' business needs, security, and service level requirements. Other support includes making migration recommendations and design-to-be architectures in AWS; migrating DoS applications and databases from on-premises to the AWS cloud; responding to incidents related to AWS services/resolving problems with infrastructure/service and providing guidance on AWS security best practices and cost optimization. We ensure that the majority of applications we maintain are strategically positioned and architected to quickly transition for more cloud-based CI/CD practices.

We provided end to end cloud application migration, cloud governance, assessment, DEVOPS, and other IT support services. This involved migration to include analysis and refactoring of applications, providing overall cloud migration roadmap and determining the cloud service model that best fits the architecture to include application data collection, software tools, system dependencies, infrastructure, user base, and environments to support cloud architecture and assessment analysis and project planning and assessment of applications for migration. We determine transformation needs required for the cloud environment, capture the project tasks and test plans using an Agile approach and carry out based upon sprint planning. Work tasks include deployment and test planning for final cutover. We migrated applications to AWS and OBO's cloud. Cloud Governance support included monitoring efficiencies and performance of computing power, usage, storage and resources and support cost analysis and tracking. Using Azure and AWS, we moved the development environment to a hybrid Azure cloud to better access tool sets and software needed during development phase. We also implemented CI/CD to allow more effective and consistent software deployments across different cloud platforms.

Department of Health and Human Services/Federal Occupational Health (FOH), Center for Technology and Innovation (CTI) Support Service Contract - \$27M. All Native provides IT service delivery and systems design and development across FOH's 425 federal agencies consisting of 3,000+ users. We provide Helpdesk, IA, and ITSM support for the Center for Technology and Innovation (CTI) to include cloud migration and service solutions, enterprise architecture, application and web development services, data center and network operations support services. All Native provides support to FOH in performing the strategic and technical Information Technology Service Management (ITSM) task and activities essential to optimize Enterprise-Wide, IT and Helpdesk operational performance, SharePoint based technical solutions and enhanced business intelligence. We assist in performing the day-to-day operations to facilitate the ongoing efficient delivery of reliable, and scalable IT environment services.

Cloud services included security and integration with policies and procedures, lifting multiple systems to the cloud, providing authorization and governance throughout the process. We provided modernization services. This included lifting windows systems from a 2008 to current server and Linux systems lifted from CentOS 6.5 to RedHat 8. Many of the systems required varying levels of rearchitecting to move to the cloud and replacements for certain hardware appliances and authentication methods had to be fully reengineered. During the authorization and governance process, the move required a new ATO due to changes in security boundaries and other substantial changes. We combined all systems under a single ATO with multiple subsystems to minimize cost, complexity, and paperwork. This required full coordination with HHS OCIO network and systems management groups to build Trusted Internet Connections to HHS network and One-Way Trust for authentication.

CBP Information Technology Contracting Division, Microsoft Office 365 Azure Operations and Support (\$19M). We assist CBP with O365 Operations and Maintenance (O&M) and planning future service sustainment, strategies and activities for Office 365, including bcore O365 services enablement, Identity Management Active Directory (AD)/Active Directory Federation Services (ADFS) configuration, Exchange Online (EXO) cleanup activities, enablement and operational sustainment of O365 applications including OneDrive, Teams, SharePoint and newly deployed M365 applications.

Tasks include migration of existing email Journaling and Office 365 Litigation hold to a cloud service supporting DHS, Email hygiene services, review of CBP's eDiscovery process providing automation when possible, migration of user "Shared Drives" to Teams or SharePoint, Integration of InTune/AutoPilot, expanding the security posture for CBP's O365 environment by upgrading CBP to the E4 license model and support integration with Federated Identity Providers and Mobile Device Management (MDM) solutions. We work with various CBP and DHS stakeholders as well as other industry partners including Peratas, Veritas, ProofPoint, Okta, Cisco, and Microsoft. Additional tasks Include:

- Supporting Email Transition to Operations and Maintenance (O&M) Status
- Overall Office 365 Service Adoption and Operations and Maintenance Support
- Transition from MAG to Azure Commercial Service, Tenant management and Operations and Maintenance Support including providing broad tenant management and expertise for all Azure Commercial resources including O365 Government Community Cloud (GCC), Infrastructure-as-a-Service (IaaS) and Platform-as-a-Service (PaaS)
